

19 (T) Tables 13 Rounds

(T may be any odd number from 15 to 25; the movement is illustrated for T equal to 19)

Type of movement: Web Mitchell.

Set out boards: Boardsets 1 to 13 are put out on tables 1 to 13.

A second set of boards is put out with boardsets 1 to 3 (1 to (T-13)/2) on tables 14 to 16 (14 to (T+13)/2), and boardsets 4 to 13 ((T-11)/2 to 13) feeding in at table 16 ((T+13)/2).

A third set of boards is put out on tables 17 to 19 ((T+15)/2 to T), with boardset 13 on table 19 (T), boardset 1 on table 18 (T-1) and boardset 2 on table 17 (T-2). Boardsets 12 to 3 (12 to (T-13)/2) are on a relay feeding in at table 19 (T) in reverse order.

Pair Numbers: As table number.

Pair Movement: NS pairs are stationary.
EW pairs move up one table.

Board Movement: Down one table around the circuit of tables 1 to 16 (1 to (T+13)/2), and the circuit of tables 17 to 19 ((T+15)/2 to T).
Stationary pairs at tables 17 to 19 ((T+15)/2 to T) play boards in reverse order.

Comment: This movement is a variation on a standard Web Mitchell, allowing 26 boards to be played at an odd number of tables between 15 and 25.
The movement of players is completely straightforward, but care needs to be taken to ensure that the correct boards are on each table, and boards remain in the correct part of the movement.
Three duplicated sets of boards are recommended to avoid board-sharing.
The use of wireless scoring devices or pickup-slips is recommended to avoid the need to amalgamate three travellers for each board.
For a single-winner movement, arrow-switch the final two rounds.
Movements can be constructed following the same principles for any odd number of tables (greater than the number of rounds) with an odd number of rounds.

Round
