

Note on Using PairsScorer with EBU Pay To Play

EBU CLUB WEBSITE

To get an EBU Club Website you need to submit your Club Membership Details. This can be done by setting all the Members details on the Members Screen, creating an XML (=P2P) file and sending to the EBU.

1) Populate the Players (Members) Database with Names, EBU Nos if known, House ID, Post Code Tel No etc. In particular, take care to mark any non-members (visitors) and any who wish to remain anonymous.

When that is complete, you need to generate the Members List file in a form suitable for EBU submission.

2a) Ensure you set Omit NonMembers & Omit Anonymous checkboxes. For P2P purposes, the EBU only need your real Members information.

2b) Set the XML (= P2P) option and do Print.
Confirm/Set your Club Name and Club EBU Number.

3 Note the generated filename (.....\reports\memberslist.xml)

4 Attach this file to an Email

5 Send to Michael@ebu.co.uk with the subject 'Club Membership List'

6 You will get an acknowledgment (possibly after several iterations) and The EBU will provide you with a Login Club Number and Password.

PAIRSSCORER P2P MANAGEMENT

1 When you set the Event Details, you need to set the values "P2P Charged" and "NGS Rated" accordingly. It is also important to ensure Club Name and EBU Club Number are set.

2 Once you have finished scoring your Duplicate, Use the "Create P2P File" command on Display Reports screen. This will create the submission file. The generated filename will be displayed if successful.

3 If there are any nonEBU players, you will get a warning report. The generated filename will be displayed at the top of the report. You should try and clear any discrepancies from that.

4 Once you are reasonably happy with that, use the "Go To EBU Club Website" command on Display Reports screen to go to the EBU Club Website Login page.

5 Login /Password.

6 Submit the file created by the Scorer browsing to the appropriate file. This will be in the installation subfolder called P2P and is of form PSmmmdd-yyyy-ev.XML where mmm = month, dd = day, yy = year, ev = event number,
